FTRTM Aromatic Hydrocarbon Resin

ETRTM

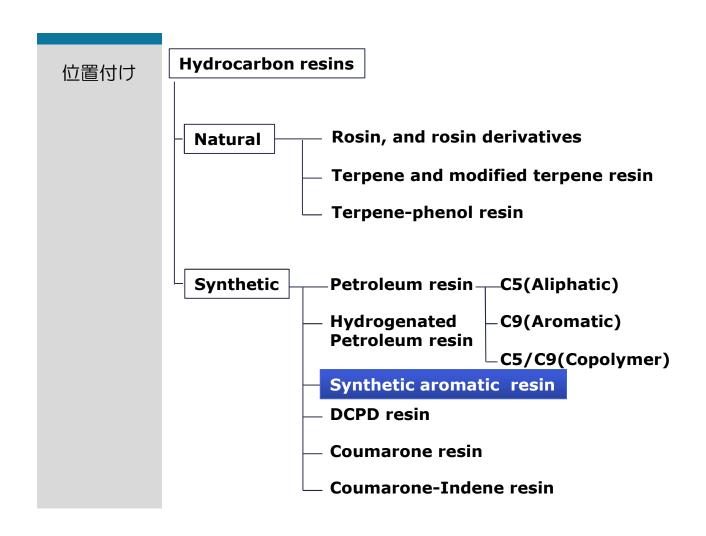

FTR™ is an Aromatic
Hydrocarbon Resin
developed by MITSUI
CHEMICALS,INC. for use in
hot melt adhesives, varieties
of adhesive tapes and toner
materials for copy machine
on the basis of its proprietary
oligomer manufacturing
technology.

FTR™ is colorless and transparent and shows excellent heat resistance, low odor, good compatibility with various plastics and elastomers, excellent high-temperature adhesion and color stability when used as tackifier.

Because of these characteristics, **FTR™** is used in the area of adhesive tapes using cellophane, polyester, polypropylene, etc. as their substrates. **FTR™** is also used widely in hot melt adhesives are made from EVA, EEA, SIS, SBS, SEBS etc.

Also, with its unique physical properties and characteristics, **FTR™** has found the use in varieties of other specialty areas like toner, thermal ink ribbon, just to name a few.

特徴

Characteristics of FTR™

- 1. Good color and heat stability
- 2. Good compatibility with various plastics, elastomers and wax
- 3. Good solubility in various solvents
- 4. Good adhesion at high temperature

Grades and physical properties of FTRTM

Grades

Zero Series	lpha-Methyl styrene Homo polymer
2000 Series	lpha-Methyl styrene/Styrene copolymer
6000 Series	Unique-aromatic monomer / aliphatic monomer copolymer
7000 Series	Unique-aromatic monomer / α -Methyl styrene/Aliphatic monomer copolymer
8000 Series	Unique-aromatic monomer Homo polymer
FMR Series	Unique-aromatic monomer /Aromatic monomer copolymer

Physical properties (Representative Values)

General-purpose grade. Excellent compatibility with various elastomers. Use as tackifier for hot melt adhesives and acrylic adhesives.		This grade has improved more compatible with styrene phase of SBR's than 6000 series.	This grade sho heat stability a hot melt adhe high quality fi required. Goo compatibility of adhesives,.	and used for sives where nish is d	This grade has high softening point. Contribution to improvement in heat resistance of SBR.
